New Vapormatic Hydraulic Coupling Plugs and Caps

Vapormatic has expanded its range of plugs and caps for standard quick release and flat face couplings. Plugs and caps should be used to cover hydraulic couplings and keep them clean when not in use. If couplings are left uncovered dirt can build up which, unless cleaned off prior to fitment in the machine, can cause contamination of the hydraulic system creating potential problems like blocked filters. These contaminants have the potential to reduce the life of hydraulic pumps through increased wear. In addition, an uncovered coupling may be exposed to weather conditions which may also contaminate the hydraulic system.
